

SICC's Contribution For A Greener Singapore

SICC has committed and aligned to 4 out of 5 key pillars outlined in SG Green Plan 2030. Beyond these, the Club will continue to explore ways to contribute towards a greener Singapore.

City In Nature

Preserving and safeguarding our natural heritage by replanting the critically endangered *Kopsia singapurensis*, along with the *Pteleocarpa lamponga* and Tembusu, both thought to be previously extinct nationwide.

Energy Reset

0.461 MWp solar PV systems were installed at Island Location, with another 0.85 MW planned for Bukit Location by end-2025, to maximise the use of cleaner energy sources.

Resilient Future

On-site herb and vegetable garden to supplement our F&B needs.

Sustainable Living

Eliminating single-use plastics with eco-friendly alternatives such as compostable cutlery and umbrella dryers.
