

Carbon Neutrality

Carbon neutrality refers to the goal of reducing carbon dioxide (CO₂) equivalent emissions to zero by taking countermeasures to absorb and mitigate as much CO₂ as is emitted.

SICC is always looking for new ways to do more for the environment through our sustainability efforts, with our long-term objective to achieve Carbon Neutrality by 2030.

SUSTAINABLE DEVELOPMENT GOALS

Members of the United Nations pledged to implement 17 Sustainable Development Goals (UNSDGs) - a shared blueprint for advancement of a sustainable, inclusive and just society.

SICC has aligned our sustainability journey with these goals and has recently gathered more than 125 sustainable initiatives that cover 9 UNSDGs.
