

Plastic Pollution

Poor management of plastic waste results in severe ecological, social and economic consequences.

Tiny Pieces, Huge Problem

Microplastics never truly biodegrade, remaining in the environment indefinitely.

Plastics Everywhere

Microplastics pollute every corner of Earth, harming animals and entering our food chain.

Plastics Choke Our Planet!

Plastic disrupts crucial natural processes, endangering our planet's health.

SICC has committed to the elimination of conventional single-use plastics from Club operations since October 2022, as part of our long-term vision for sustainability and reducing negative impacts on our environment.

SUSTAINABLE DEVELOPMENT GOALS

Members of the United Nations pledged to implement 17 Sustainable Development Goals (UNSDGs) - a shared blueprint for advancement of a sustainable, inclusive and just society.

SICC has aligned our sustainability journey with these goals and has recently gathered more than 125 sustainability initiatives that cover 9 UNSDGs.
