

Due to SICC's proximity to the Central Catchment Reserve, lots of local fauna make their home in and around our golf courses. We work closely with organisations such as the National Parks Board (NParks) and the Animal Concerns Research and Education Society (ACRES) to manage the biodiversity surrounding our facilities and ensure the SICC grounds form a welcoming habitat for our local wildlife.

Keep an eye out on the golf course sometime, and you might spot some of these uncommon animals that can be found around the Club.

Purple Heron at Island Course

White-throated Kingfisher at Bukit Course

SICC remains committed to forging new paths in our sustainability efforts.

SUSTAINABLE DEVELOPMENT GOALS

TOGETHER WE CAN MAKE A DIFFERENCE

Members of the United Nations pledged to implement 17 Sustainable Development Goals (UNSDGs) - a shared blueprint for advancement of a sustainable, inclusive and just society.

SICC has aligned our sustainability journey with these goals and has recently gathered sustainable initiatives that cover 11 UNSDGs.
