

RECHARGE YOUR ELECTRIC VEHICLES AT SICC

To cater to the increase in usage of electric vehicles (EVs), four EV charging bays (two AC and two DC chargers) have been set up at the Level 1 Carpark (close to the Loading Bay). The DC charging points will allow drivers to fully charge their EVs in as little as 30 minutes.

The chargers have been installed since Wednesday, 4 May 2022 for drivers to charge their EVs. They may use the Singapore Power (SP) Utilities App to charge their EVs by scanning the QR codes located on the respective charging ports.

These newly installed EV chargers are part of the green initiatives that the Club has implemented in the past months. The Club is stepping up our efforts in support of the nation's Green Plan 2030 to build a sustainable future for all.
