

BIN IT, NOT FLICK IT

LEAVE NO CIGARETTE BUTTS BEHIND

Many cigarette butts are found on the golf courses every day.

Improperly disposed cigarette butts disturb the ecology of our beautiful golf courses and contaminate our lakes and waterways during rainfall. Being non-biodegradable, the nicotine, cigarette filters (made of a plastic called cellulose acetate) and many other chemicals are toxic to wildlife once ingested.

We seek your kind cooperation to dispose your cigarette butts in the ashtrays in our buggies or in our bins at the golf courses. Let's work together to keep our environment and golf courses cigarette butt-free!
